Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1841 edition. Excerpt: .they are shorter, having receded to the margin of the cartilage which is not subject to concussion. In the foetal subject this band is more broad in some parts than others; but those portions of it which project to an inconsiderable extent over the surface of the cartilage, have, on the opposite part of the circumference, others which project to a considerable extent. Various Characters of the Synovial Vessels.--These synovial vessels consist of arteries which take a direction towards the centre of the articular cartilage, and of veins which take a retrograde course. The arteries become continuous with the veins in the following ways: --1st, the artery becomes directly continuous with the vein without undergoing any change in its size, forming with the latter a simple loop (Plate XIII. fig. 1.); 2ndly, numerous arteries terminate in a single vessel from which veins arise; (this disposition...
